

Massey Ferguson Introduces N-Series Split/Narrow Row Planter at 2026 Farm Progress Show

September 2, 2026

New planters combine proven technology, flexible performance and straightforward ownership to help farmers maximize productivity and achieve better in the field.

BOONE, Iowa, Sept. 2, 2026 /PRNewswire/ -- AGCO (NYSE: AGCO) introduced the new Massey Ferguson™ N-Series split/narrow row planters at the 2026 Farm Progress Show. Built to help farmers get more from every pass without adding complexity to their operation, the new lineup combines factory-installed Precision Planting™ technology with a highly modular design. The N-Series is available in six configurations: 23-15, 24-15, 31-15, 32-15, 24-20 and 24-22, giving producers options to match their operation while supporting consistent emergence and long-term value.

"Farmers want proven technology without unnecessary complexity," said Forrest Francis, Tactical Marketing Manager, Planters, Massey Ferguson North America. "The N-Series delivers the performance producers need today while giving them the flexibility to adapt as their operation grows. It's about putting technology to work where it can make a meaningful difference while keeping the planter straightforward to own, operate and maintain."

Every planting window is an opportunity to establish the crop for the season ahead. Factory-installed Precision Planting technologies, including 20|20 Gen3™, vSet2™, vDrive™ and DeltaForce™, work together to promote accurate seed placement, consistent planting depth and uniform emergence. For producers, that means greater confidence in each pass and technology focused on the agronomic outcomes that matter throughout the season. Twin 45-bushel central seed tanks, an optional liquid fertilizer capacity of up to 500 gallons and in-cab manual weight transfer help operators stay productive and adapt to changing field conditions.

That focus on long-term value extends beyond the planting season. The N-Series' modular platform allows producers to add optional technologies, including WaveVision™, SpeedTube™, CleanSweep™, EMHD™ and Pump Stack, as their needs evolve, helping reduce future upgrade costs and downtime. Durable Heads Up™ row units, greaseless operation, easy adjustments, lower maintenance requirements and no subscriptions or unlocks help reduce the demands of ownership while maximizing return on investment.

The N-Series split/narrow row planters are one of several new products featured in the Massey Ferguson exhibit at the Farm Progress Show (AGCO booth #1002). Visitors can also explore a range of farmer-focused innovations designed to help improve productivity, efficiency and ease of operation. Highlights include updates to the MF 9S Series tractors featuring Tractor Implement Management (TIM) and MF AutoHeadland, the MF 5S Series with the new Dyna-VT™ continuously variable transmission (CVT) and the latest advancements in the Massey Ferguson double baler. Each innovation reflects Massey Ferguson's commitment to delivering solutions that maximize time in the field, simplify daily tasks and help farmers achieve better in the field.
