AGCO Corporation
Conflict Minerals Report
For the Calendar Year Ended December 31, 2019

I. Introduction

AGCO Corporation (the “Company”) manufactures and sells products that contain Conflict Minerals. (Capitalized terms that are used but not defined in this Report have the meanings given to them in Form SD.) Due to the depth of the supply chain, the Company is far removed from the sources of ore from which these Conflict Minerals are produced and the smelters/refiners that process those ores. The efforts undertaken to identify the countries of origin of those ores reflect our circumstances and position in the supply chain. The amount of information globally on the traceability and sourcing of these ores is limited at this time; this situation is not unique to the Company.

The Company supports the initiatives embodied in Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act and the related SEC rule designed to limit the flow of funds to armed groups in the Democratic Republic of the Congo and adjoining countries from the production of conflict minerals, and it is the Company’s policy to promote responsible sourcing.

The Company developed and published its Conflict Minerals Policy, which is available on the Company’s website at http://www.agcocorp.com/content/dam/agcocorp/Suppliers/AGCO_Conflict_Minerals_Policy_092013.pdf.

During 2019 the Company identified its suppliers that had the potential to sell to the Company products that contain conflict minerals and asked these suppliers to identify, using a website established by the Company, the sources of the Conflict Minerals and products containing Conflict Minerals that they supply to the Company. The responses were reviewed by the Company for completeness and consistency of answers. The Company requested suppliers to provide corrections and clarifications where needed.

II. Due Diligence Program Design

The Company designed its overall Conflict Minerals procedures in conformity with the five step framework contained in the *OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, Third Edition*, and the supplements on tin, tantalum, tungsten and gold. The principal features responding to each of the five steps are outlined below:

- 1 Establish strong company management systems. The Company did this by:
 - Creating an internal policy governing our conflict minerals compliance program;
 - Publishing its Conflict Minerals policy at http://www.agcocorp.com/content/dam/agcocorp/Suppliers/AGCO_Conflict_Minerals_Policy_092013.pdf;
 - Engaging with the Company’s global direct material and spare parts supply base to ensure awareness and motivate action as it relates to Section 1502;

- Utilizing the Conflict Minerals Reporting Template developed by the Responsible Minerals Initiative to identify smelters and refiners in the supply chain;
- Reporting to senior management no less frequently than quarterly on (a) suppliers' responses to the Company's inquiries, and (b) supply chain risk;
- Maintaining active membership in the Responsible Minerals Initiative, an industry initiative that audits smelters' and refiners' due diligence activities;
- Including conflict minerals expectations in standard contract language, new supplier on-boarding procedures and regular supplier quality audits;
- Having a cross-functional conflict minerals executive steering committee, with representatives from finance, legal and purchasing functions to provide oversight to the Company's conflict minerals program;
- Making available an Ethics Hotline for employees, suppliers, or other interested party to report violations or questions related to conflict minerals at AGCO.

2 Identify and assess risk in the supply chain. The Company did this by:

- Surveying suppliers of products that the Company identified that had the potential to contain Conflict Minerals (covering 100% of 2019 expenditures for direct material components and spare parts);
- Reviewing internally-approved criteria to identify errors, omissions, and missed expectations on supplier Conflict Minerals Reporting Template submissions;
- For those suppliers who did not respond to our surveys, we conducted additional procedures, including e-mail communication and personal contact with top-spend suppliers;
- Performing direct smelter outreach to encourage participation in the Conflict-Free Smelter Program;
- Evaluating smelter information provided by the supply chain against data from the Responsible Minerals Initiative.

3 Design and implement a strategy to respond to identified risks. The Company did this by:

- Reporting to senior management no less frequently than quarterly on (a) suppliers' responses to the Company's inquiries, and (b) supply chain risk;
- Providing an annual update to the Audit Committee of the Company's Board of Directors;
- Following up and informing suppliers of improvements to be made in conflict minerals submissions, including providing information on smelter certification status and requesting direct smelter outreach for reported alleged smelters not participating in a certification program;
- Increasingly emphasizing the Company's Conflict Minerals policy intent to 'limit purchases from the supplier to the extent practicable or seek alternative suppliers where commercially feasible' should a supplier be unwilling to adhere to the Company's Conflict Minerals policy.

4 Carry out independent third-party audit of supply chain due diligence at identified points in the supply chain. The Company did this by:

- Encouraging hesitant smelters/refiners to participate in the Conflict-Free Smelter Program through active participation in the Responsible Minerals Initiative's smelter engagement team and direct outreach to suppliers;
- Participating in various industry groups to promote conflict minerals disclosure and best practice to manage conflict mineral processes.

5 Report on supply chain due diligence. The Company did this by:

- Filing an annual Form SD and Conflict Minerals Report with the Securities and Exchange Commission and making that filing available on the Company's website.

III. Due Diligence Program Results

Attached as Schedule A is the list of facilities that, based on the due diligence process described above, were reported as being included in the Company's suppliers' supply chains, during the Reporting Period. The majority of supplier responses provided data to the Company at the supplier company level, rather than specifying the smelters or refiners used in components supplied specifically to the Company.

IV. Risk Mitigation – Future Due Diligence Measures

In future years the Company expects to continue to make inquiries to its suppliers, with its objective being to increase the response rate and completeness of responses each year. The Company conducts periodic reviews of strategic suppliers, and as part of those reviews has included questions relating to Conflict Minerals sourcing. Moving forward, we plan to continue membership and participation in Responsible Minerals Initiative activities in order to collaborate with fellow filers and confirm best practice in the conflict minerals space.

V. Product Description

The products subject to the disclosure are tractors, combines, hay tools, sprayers, forage equipment, grain storage and protein production systems, seeding and tillage implements and replacement parts.

VI. Independent Private Sector Audit

Not required for calendar year 2019.
